SPINAL CORD INJURIES THERAPY AND REHABILITATION

January 1977 through October 1980

251 Citations

Prepared by Charlotte Kenton

Covers clinical and experimental therapies and rehabilitation measures with a selective inclusion of citations to nursing and psychological adjustment. Spinal cord compression is not included. The Appendix contains references from CATLINE.

best copy available

This bibliography contains references to recent articles selected from some 3,000 English and foreign language journals and a limited number of monographs. Articles from these journals and monographs are indexed for inclusion in *Index Medicus* and other bibliographies produced by the National Library of Medicine. The references in this Literature Search were retrieved from NLM's MEDLINE data base; the dates above show the period during which the references were added to MEDLINE.

Each citation is listed with the descriptors selected from NLM's list of Medical Subject Headings (MeSH) under which the article was indexed. MeSH descriptors of most significance in an article are identified with an asterisk. The article cited will be found in *Index Medicus* only under these starred descriptors.

A bracketed title indicates the article is in a foreign language. For foreign language articles the designation ENG.ABSTR. follows the publication date if the article includes an English abstract; language abbreviation in parenthesis follows.

A full explanation of the elements included in each citation, as well as a complete list of current NLM Literature Searches are included in *Index Medicus* and *Abridged Index Medicus*. To obtain a current list of Literature Search titles, write: Literature Search Program, Reference Section, National Library of Medicine, 8600 Rockville Pike, Bethesda, Maryland 20209. Please include your name and address typed on a gummed label (no return postage necessary).
